

CPC Members,

Contractor Plan Center is pleased to host On-Screen Takeoff software training with local software solution provider, Taking Off Solutions, on July 26th & 27th. Taking Off Solutions is an authorized solution provider for On Center Software and has helped thousands of contractors learn to use On-Screen Takeoff to its fullest potential. When downloading projects from the Contractor Plan Center you have an option to download your project directly into On-Screen Takeoff PlanViewer or Professional.

Thursday, July 26th, Taking Off Solutions will be onsite and provide training at no charge on the On-Screen Takeoff PlanViewer software (the PlanViewer software is available at no charge on the Contractor Plan Center website). Learn time-saving tips and tricks to get the most out of this valuable tool. Again, this workshop has no charge for the software or the training.

The next day, Friday, July 27th, Taking Off Solutions will follow-up with a more in-depth training on the professional version of On-Screen Takeoff (advance registration and fee required). If you already own the professional version of On-Screen Takeoff, this one-day class is a great way to get up to speed and become fully productive in a short amount of time. This class is great for users who are just starting out.
